prediction encoding a picture by referring to an encoded

1 - 4 of 5 for prediction encoding a picture by referring to an encoded area in the picture or different encoded

picture and reconstructing the picture using encoded data and deblocking reducing distortion by filtering a boundary between blocks of the reconstructed picture and filters are respectively applied to the luminance components and the chrominance components and a type of filters is selected based on encoding information of each luminance component and the selected filter is applied to the luminance component and a filter selected for a luminance component which belongs to a same filed as a chrominance component and corresponds to the chrominance component ([About](#)) - 0.52 s | [SearchScan^{BETA}](#) On
